Product Datasheet

Part Code: VS-LED-HP

Driver's - LED System Health Indicator

Key Features

- Provides an Instant, simple visual health diagnostics
- Reports the health of all the complete CCTV system
- Checks CCTV systems - Cameras / HDD's / NVR health and DC Power.
- Compact Design - Dashboard and A-pillar mountable
- Rugged construction

General Overview

The Vidi-Safe LED health indicator is designed to provide a clear, visual confirmation of the complete CCTV system health to the driver, before he/she takes the vehicle into service.

It is a low-cost alternative to our automated remote vehicle diagnostics package using Vidiwave's WIMS (Wireless Integrated Management System) via 3G or WLAN.

This simple compact module allows the driver to have complete peace of mind that the vehicle CCTV is fully operational, providing protection to staff and passengers throughout the day (and night).

Should an error occur, a fault light will light to alert the driver that the system needs an engineer to investigate the fault log of the NVR and investigate to repair the system. The log will accurately report the fault in detail to facilitate a quick fix and return to full operation.

Specifications

Construction	Mild galvanised steel
Finish	Double powder coat
Wiring	LSOH Pre-wired loom (Type: Belden 8723 independently shielded pairs - data & power).
Dimensions	(W) 70mm x (H) 65mm x (D) 37mm
Operating Temp	-15° ~ +65°
Compliance	EN-50121, EN-55022, e1
